Introduction and background

One of the ways Ofwat regulates the water and wastewater service providers in England and Wales is to set the price, investment and service package that customers receive. This includes controlling prices companies can charge their customers.

A review of the price limits is carried out every five years - the current price review for 2024, known as 'PR24', will set price controls for the period 2025-2030. As part of the PR24 process, Anglian Water (the 'Company') is required to submit a Business Plan and Long Term Delivery Strategy (LTDS). In the Business Plan and LTDS we are providing a wide range of information to our Regulators and stakeholders. They have a reasonable expectation that they can rely on that information when making judgements about Anglian Water and that the information forms the basis for honest and open conversations about our Business Plan and LTDS. The Board also play an important role in providing overall assurance that the Business Plan and LTDS are high quality, represent best value for customers, communities and the environment, will support operational, corporate and financial resilience and that they are deliverable. This document outlines the assurance plan that we have in place for the business planning process to meet those objectives, taking into account the requirements and expectations detailed in Ofwat's PR24 Final Methodology, prior to submission and publication of our final Business Plan and LTDS in October 2023.

This is a supplementary document to 'Our Assurance Framework' which we published in March 2022¹.

What is meant by an assurance strategy

Our Assurance Strategy describes how we work to ensure the information we provide to stakeholders meets the expected standards of quality. It describes how we assess the risk that a piece of information may be unreliable and how we tailor our assurance in response to those risk assessments.

We define assurance to be confirmation by a party making an assertion that the assertion is true, within the range of likely error specified. The basis of the assurance will vary and may (but not necessarily) include the involvement of an assurance provider who is independent of the party making the assertion. There is a cost to assurance, which means that a framework is required to ensure we apply assurance in the most efficient manner.

The principles and approaches set out in our Assurance Strategy, apply to all the activities we undertake on a daily basis, including our approach to developing our Business Plan and LTDS for PR24.

Our commitment to delivering high quality data

The culture of any organisation is defined by the values stated by the organisation and the knowledge, skills and attitudes of its employees. It is evident in the way those values, knowledge, skills and attitudes are made real in the actions and behaviours of its employees. It can be described as 'the way the organisation conducts its business'.

Culture is highly relevant to the assurance process because it sets the expectations of the business for accurate information. As we set out in our Assurance Strategy we have a positive corporate culture that embeds expectations for, and controls that deliver, complete and accurate information as a part of the way we work. In particular:

¹ Our Assurance Framework (anglianwater.co.uk)

- a high value is placed by the top leadership on accurate information and transmitted to individuals throughout the organisation;
- resources are allocated to ensuring information accuracy;
- provision of high quality information is rewarded;
- individuals at all levels have a starting assumption that information is a corporate asset that must be valued; and
- it is acceptable to be honest about errors.

This is reinforced by our governance – the framework of rules, policies, procedures and bodies the organisation has put in place to enable the smooth conduct of its business, ensure it complies with its responsibilities and manage its risks.

Consistent with our Assurance Framework, we have adopted the concept of the multiple "lines of defence" against data error for PR24 and LTDS.

- 1st line of defence Functions that own and manage risk & control: Managers and staff are
 responsible for identifying and managing risk as part of their accountability for achieving
 objectives. By diligently checking data sources and analytical tools, experienced staff provide
 the first line of defence against errors. Automated controls can also be built into systems,
 databases and spread sheets to flag errors.
- 2. **2nd line of defence Functions that oversee risk & control**: The 2nd line provides policies, frameworks, tools, techniques and support to enable risk and compliance to be managed in the first line.
- 3. **3rd line of defence Functions that provide independent assurance**: Typically fulfilled by Internal Audit, 3rd line acts independently of 1st line and 2nd line to ensure that the first two lines are operating effectively and advises how they could be improved.
- 4. **4th line of defence External bodies such as external audit or other third party assurance providers**: These may give assurance to both the organisation and other stakeholders that appropriate controls and processes are in place and are operating effectively.

It is not necessary to deploy all four lines of defence against every piece of data. For example, if we are satisfied that the first two lines are working sufficiently well we will not deploy lines 3 and 4. Review or audit by a party external to the Company provides an additional level of control but is not necessary if other controls are working effectively and the residual risk of error is low. Third party audit is just one tool in an extensive tool box. What determines the correct number of lines of defence to employ is our assessment of the risk that a particular piece of data may be wrong. We describe our risk assessment process later in this document.

Our governance structure for PR24

Our PR24 planning process is governed by an overarching framework, with overall accountability and responsibility lying with the AWS Board. The AWS Board is responsible for assuring our final Business Plan and LTDS by challenging company management and satisfying itself, amongst other things, that:

- all the elements add up to a plan that is high quality in the round and deliverable;
- that the overall strategy for data assurance and governance processes delivers high quality data across all aspects of the plan and LTDS; and
- that the Plan and LTDS will deliver operational, corporate and financial resilience over PR24 and the long term.

This will ultimately be captured in a Board statement that provides this assurance and details the steps taken by the Board, and the evidence it has relied upon, to make the relevant statements.

Board engagement in the development of our PR24 Business Plan and LTDS has been ongoing for many months. The diagram below shows the governance structure for PR24. Where possible, existing business as usual groups are integral to the programme management.

To enable the Board to have proper oversight and involvement with all aspects of the Business Plan and LTDS, under the oversight of the Audit Committee at least one Non Executive Director (NED) will be nominated to act as the Board's lead for each of the key areas for assurance, with responsibility for:

- ensuring that the appropriate lines of defence have been deployed to assure data quality;
- assessing the suitability of the external assurance providers, including their independence, skills and expertise; and
- confirming that the Ofwat expectations for assurance and a high quality plan have been met.

The NED leads will report to the Board.

What information needs assuring?

This Assurance Strategy applies to the information we will be submitting and publishing as part of our Business Plan for the period 2025-2030 and LTDS for 2025-2050. This includes, but is not be limited to the following:

- Financial elements such as assumptions and financeability
- Data tables for both PR24 and LTDS and associated commentaries required by Ofwat
- Associated feeder models
- Approach, structure and content of PR24 Business Plan and LTDS, including ensuring consistency with the Water Resources Management Plan, the Drainage and Wastewater Management Plan and the Water Industry National Environment Programme
- Ensuring the use of adaptive planning
- Approach to engaging customers on PR24 and LTDS including societal valuations update
- Outcomes development, including performance commitments and setting of outperformance / underperformance payments
- Development of investment options, optimisation of options and cost estimation validation
- Price Control Deliverables
- Economic and company scenarios
- Cost adjustment claims
- PR19 reconciliation
- Vulnerability and affordability
- Direct Procurement for customers
- Cost modelling

Forms of assurance

We ensure the level of assurance is appropriate to the type of data in scope. Consequently, the basis of our assurance activities varies. For PR24 assurance activities are being carried out by a number of parties:

PR24: Governance and external perspectives

^{11.}

The matrix below summarises how assurance providers have been allocated across the workstreams.

It should be noted that in all cases, at least two forms of assurance will be carried out, providing a broad scope of review and added resilience.

Our Risk Assessment process for data tables

Assurance of the data tables by external third parties will focus on areas of highest risk; those tables where the likelihood or impact of inaccurate data is the greatest. We assessed each data table against the following criteria to identify the highest risk tables:

- high/medium/low ratings assigned for tables that were key as part of financial modelling
- Tables were given a significance scoring if they were inputs to the financial modelling or key to the business plan
- The volume of cells in a table that were copied from other tables or were auto calculated
- The level of assumption/subjectivity needed to create data in each table, particularly for forecast data
- The complexity of producing table data (e.g. systems, processes and data)
- Could data sources be validated via supporting documentation, audit trail and controls?
- People risks (e.g. experience, single point of failure)
- Strategic importance of data (e.g. Ofwat, Customers and other external stakeholders)

The results of the risk assessment are

- 60 of data tables to be assured internally.
- 106 of data tables to be assured internally, and be subject to external assurance.
- 11 tables to be confirmed on receipt of more detailed information from OFWAT re the requirements for the tables.

A full list of tables with allocated provider can be found at Appendix 1.

Depending on the individual data tables, the terms of reference for the assurance reviews may include an assessment of the following:

• Compliance with PR24 methodology requirements, including any assumptions

- The robustness of supporting evidence
- Data validation processes
- Consistency of data across tables
- Areas of concern or weakness

Assurance for our Independent Challenge Group

Our Independent Challenge Group (ICG), comprises members from a number of interested stakeholder groups. For the purpose of PR24, the role of the ICG is to scrutinises and constructively challenge Anglian Water on:

- the quality of its engagement with the customers and the wider communities and stakeholders it serves
- the extent to which customer priorities are reflected in what the company does, and
- the company's delivery against those priorities.

In addition to the assurance activities outlined above, our ICG can independently request additional assurance activities are carried out on its behalf to help satisfy itself that it has provided sufficient challenge.

Regular assurance updates are provided to the ICG by the Company and by third party assurance providers if required.

Timescales

Our assurance activities are already underway, having begun in 2021 by supporting the Assurance of the Water Resource Management Plan, Drainage Wastewater Management Plana and WINEP. They were subject to independent third party assurance. Our assurance activities will continue throughout 2023 until we submit and publish our final business plan and LTDS, and beyond that to manage the period of activity until Ofwat's final determination in December 2024.

We will submit and publish our final business plan and LTDS, along with signed Board Assurance Statements and copies of reports produced by our independent third party assurance providers, by Ofwat's deadline of 2 October 2023.
