WATER COMPANY OF THE YEAR

1. Introduction

1.1 About our company

Anglian Water is the largest water and wastewater company in England and Wales geographically, cover 20% of the land area. We operate in the East of England, the driest region in the UK, receiving two-thirds of the national average rainfall each year; that's approximately 600mm. Our region has over 3,300km of rivers and is home to the UK's only wetland national park, the Norfolk Broads. Between 2011 and 2021, our region experienced the highest population increase in England. De this, we are still putting less water into our network than we did in 1989.

1.2 Planning for the long term

Our company Purpose is "to bring environmental and social prosperity to the region we serve through commitment to Love Every Drop".

This purpose is at the heart of our business, having been enshrined in our Articles of Association in 2019 Central to delivering this purpose is planning for the long term; one of the strategic planning framework use to achieve this is the Water Resources Management Plan (WRMP), which details how we will ensure resilient water supplies to our customers over the next 25 years. A WRMP looks for low regret investmen for our region, giving flexibility to adapt to future challenges and opportunities such as technological advances, climate change, demand variations, and abstraction reductions.

1.3 What is a Water Resources Management Plan

We produce a WRMP every five years. It is a statutory document that sets out how a sustainable and see supply of clean drinking water will be maintained for our customers. Crucially it takes a long-term view over 25 years, allowing us to plan an affordable, sustainable pathway that provides bene

our customers, society and the environment.

Our previous WRMP, WRMP19, had an ambitious twin track strategy, combining an industry leading smatrix meter roll out and leakage ambition with a strategic pipeline across our region, bringing water from areas surplus to areas of deficit.

This WRMP focusses on the period 2025 to 2050, and is known as WRMP24. We have developed it by following the Water Resources Planning Guideline (WRPG), as well as other relevant guidance, in order meet statutory requirements.

1.4 Developing our WRMP

Our WRMP24 has been progressed following processes detailed in the WRPG. We start by determining extent of the challenges we face between 2025 and 2050.

love every drop

	We achieve this by developing forecasts to establish the amount of water available to use (supp
ring	forecast) and the amount of water needed (demand forecast) in our region.
-	When these forecasts are combined, a baseline supply-demand balance is created. This tells us
	whether we have a surplus of water or a deficit, establishing our water needs for the planning
	period. An appraisal for both demand management options and supply-side options is
espite	undertaken.
	We environmentally assess both demand management and supply-side options so we can
	understand their potential environmental impacts and what could be put in place to mitigate
	them.
our	The next step is for the water savings associated with the chosen demand management options
loui	be added into our baseline supply-demand balance to determine if our region's water needs are
9.	met. If the demand management options savings do not solve the need, supply-side options are
	added into the modelling process and solution development.
ks we	
e ents	1.5 Best value plan
111.5	To ensure we developed the right solution for our region's water needs, we have focussed on 'b
	value'. To us, best value is looking beyond cost and seeking to deliver a benefit to customers and
	society, as well as the environment, whilst listening and acting on the views of our customers ar
	stakeholders.
cure	1.6 Our revised draft WRMP24
ofit to	Our best value plan, the revised draft WRMP24, has been produced following a public

Revised draft WRMP24

Introduction

1.9 This report provides a non-technical summary of the WRMP24 Water Resource Zone (WRZ) data. It highlights key supply and demand information across the 27 WRZs included in WRMP24, grouped by region based on the outcomes of our problem characterisation analysis.

Resource Zone	Area
Suffolk Ixworth	Cambridgshire & West Suffolk
Suffolk Sudbury	Cambridgshire & West Suffolk
Suffolk Thetford	Cambridgshire & West Suffolk
Suffolk West & Cambs	Cambridgshire & West Suffolk
Essex Central	East Suffolk & Essex
Essex South	East Suffolk & Essex
Suffolk East	East Suffolk & Essex
Fenland	Fenland
Hartlepool	Hartlepool
Lincolnshire Bourne	Lincolnshire & Nottinghamshire
Lincolnshire Central	Lincolnshire & Nottinghamshire
Lincolnshire East	Lincolnshire & Nottinghamshire
Lincolnshire Retford and Gainsborough	Lincolnshire & Nottinghamshire
Norfolk Aylsham	Norfolk
Norfolk Bradenham	Norfolk
Norfolk East Dereham	Norfolk
Norfolk East Harling	Norfolk
Norfolk Happisburgh	Norfolk
Norfolk Harleston	Norfolk
Norfolk North Coast	Norfolk
Norfolk Norwich & the Broads	Norfolk
Norfolk Wymondham	Norfolk

2. Strategic Overview

Ruthamford

2.1Strategic risk and issues

Ruthamford experiences significant pressures.

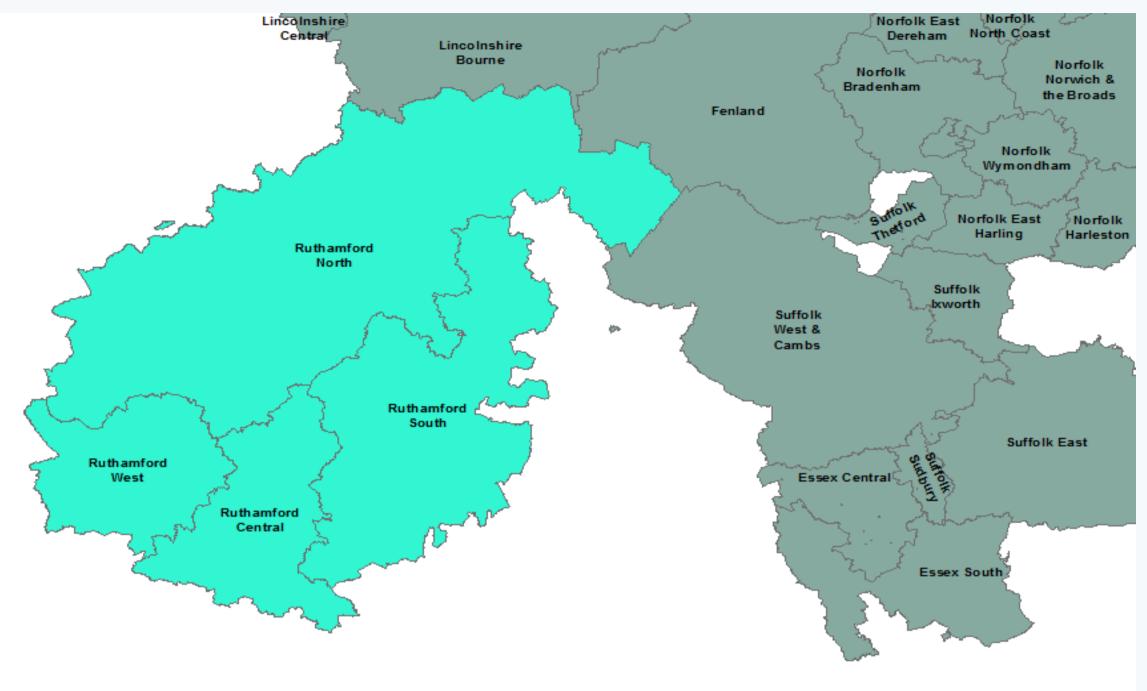

- The area is vulnerable to baseline growth and growth associated with Oxford-Cambridge Arc, Climate Change and extreme drought.
- In addition, there is potential for sustainability reductions in the Cam & Ely Ouse to significantly increase baseline scenario deficits in Environmental Destination scenarios.

Ruthamford is our most complex supply system, and we have refined our understanding of DO and conjunctive dependencies.

There is also complexity associated with peak demand.

3. Deployable Output summary DYAA

Ruthamford Central

3.1 Resource Zone geography: Ruthamford Central:

The Ruthamford Central WRZ covers an area of 719 sq. km and includes the supply system for Milton Keynes.

It should be noted that this WRZ has no actual supply sources of its own and is supplied by transfers from Ruthamford North and Ruthamford South WRZs.

3.2

Note that there are no water sources within this zone.

Baseline deployable output (including 1:500 drought): 0.0 Ml/d

Deployable output reductions

Restoring sustainable abstraction (recent actual average): 0.0 MI/d

Reductions to achieve environmental destination (BAU+): 0.0 Ml/d.

Climate change: 0.0 Ml/d by 2050.

Baseline deployable output reduces by a total of 0.0 Ml/d by 2050.

3.3 Baseline Deployable Output Information

The baseline Deployable Output data shows the Environment Agency's preferred approach to reducing water use. It uses average licence limits from 2022–2024 for short-term licences and sets limits for permanent licences by 2030. A major drought impact (1 in 500 years) is included from 2025, not from 2039/2040 as preferred. These changes apply only to the baseline forecast. In the final plan, we use a different approach. It includes licence limits chosen through a step-by-step process to bring in changes earlier. The 1 in 500 drought rule starts in 2039/2040 in that plan. You can find more information in section 6 of the WRMP24 Decision Making technical document.

5.1 DYAA BL supply demand summary: Ruthamford Central

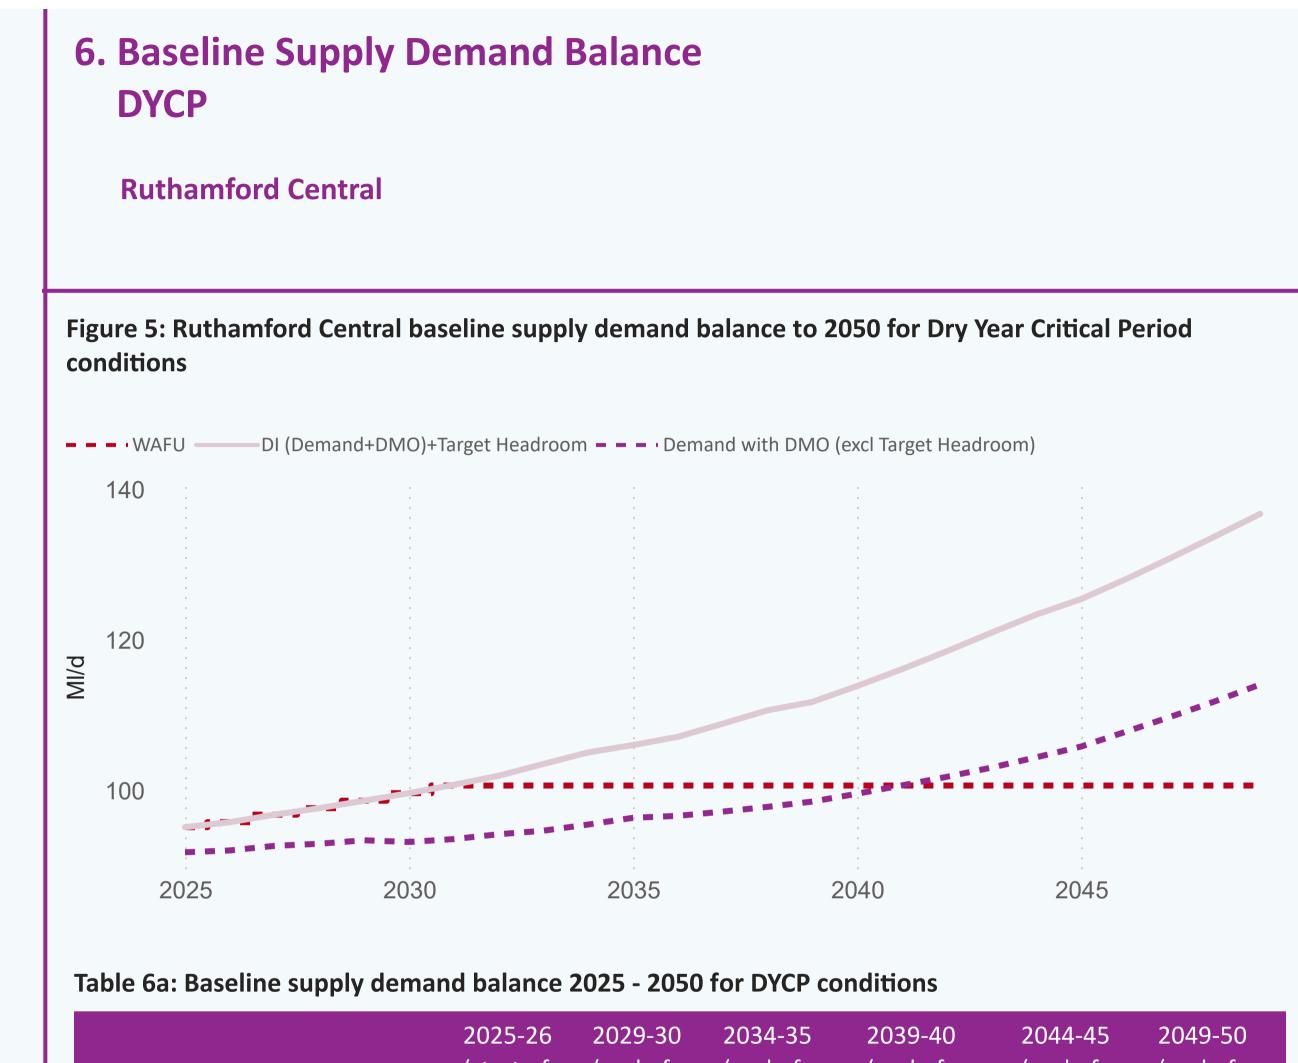

Baseline Supply Demand Balance: This zone is expected to go into deficit by 2026 (under the preferred baseline scenario - as described in section 3.3).

- Demand Forecast: Baseline household demand (measured and unmeasured) is forecast to change from 47.8 MI/d in 2025 to 65.2 MI/d in 2050, a percentage change of 36.6 %.
- Baseline Leakage: is forecast to change from 7.3 Ml/d in 2025 to 7.7 Ml/d by 2050.
- Baseline Non-Household demand: is expected to change from 18.3 Ml/d to 31.4 Ml/d.
- Baseline Distribution Input: is expected to change from 73.5 Ml/d to 104.3 Ml/d by 2050.

6.1 DYCP BL supply demand summary: Ruthamford Central

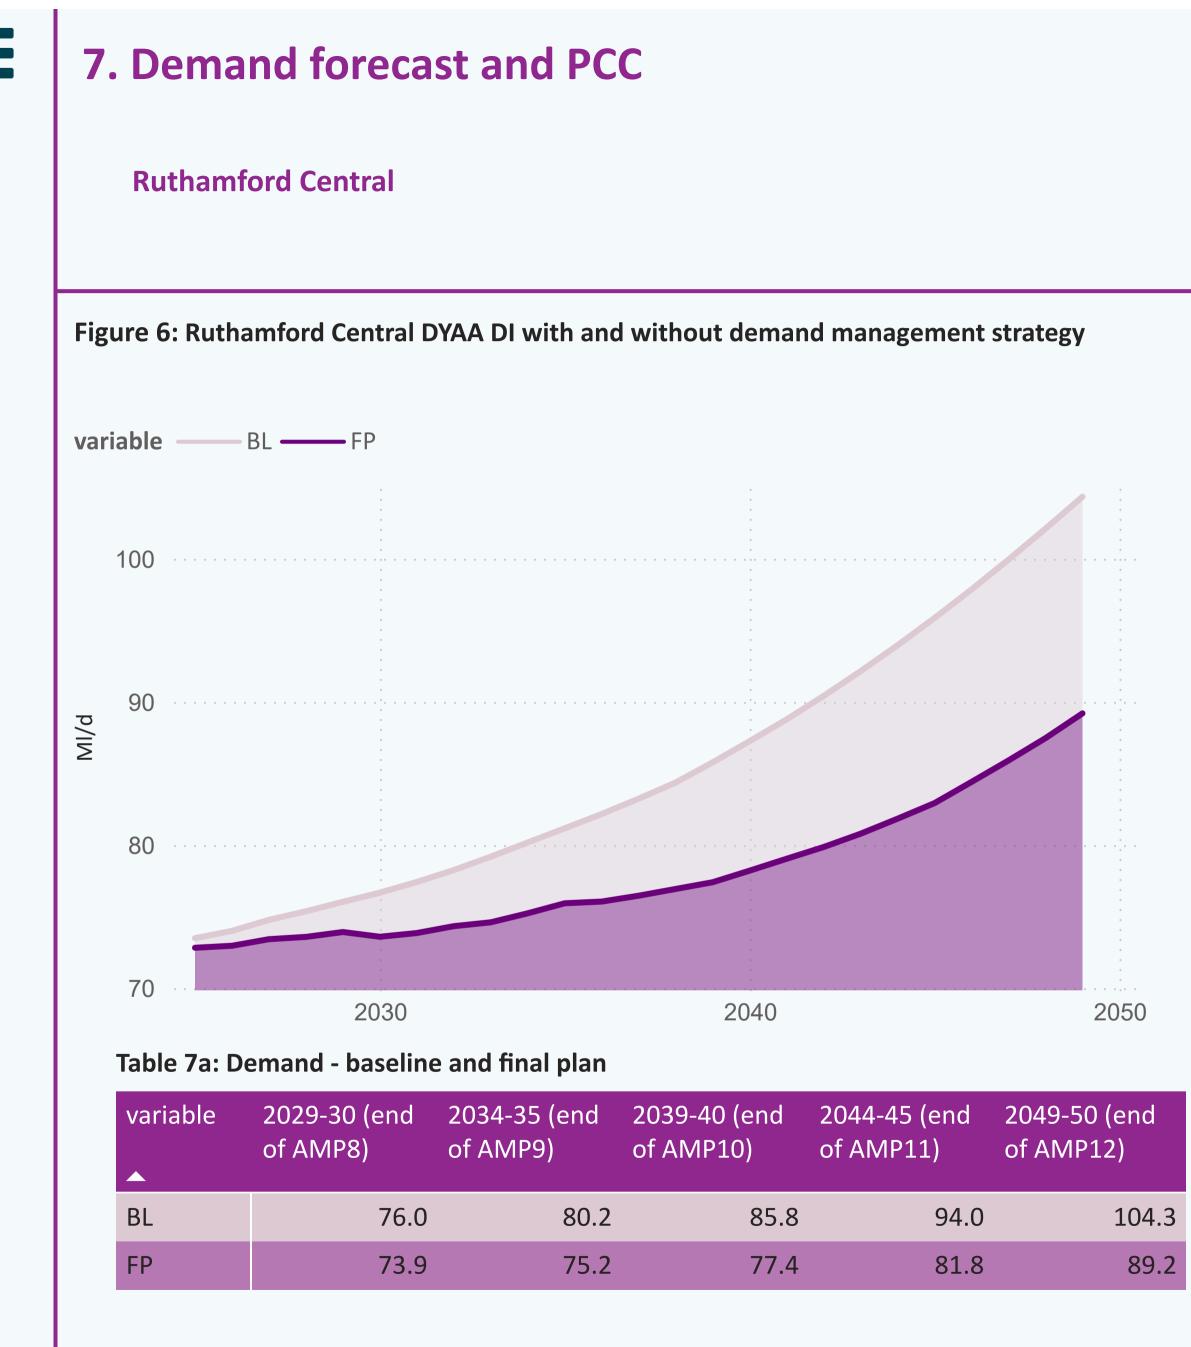

Baseline Supply Demand balance: This zone is expected to go into deficit by 2028

- Demand Forecast: Baseline household demand (measured and unmeasured) is forecast to change from 62.8 MI/d in 2025 to 86.9 MI/d in 2050, a percentage change of 38.5 %.
- Baseline Leakage: is forecast to change from 7.3 Ml/d in 2025 to 7.7 Ml/d by 2050.
- Baseline Non-Household demand: is expected to change from 22.5 Ml/d to 38.5 Ml/d.
- Baseline Distribution Input: is expected to change from 92.7 MI/d to 133.2 MI/d by 2050.

Nb. 'Deficit' is one outcome of the calculation WAFU minus Distribution Input (including Target Headroom).

7.2 Demand Ruthamford Central (see Table 7a)

Baseline demand is expected to increase from 73.5 (MI/d) in 2025 to 104.3 (MI/d) in 2050. With demand management options in place, demand is expected to be 89.2 (MI/d).

7.1 PCC Ruthamford Central (see Table 7b)

Per Capita Consumption (PCC) in the base year 2025/26 is 129.4 (l/h/d) measured and 175.5 (l/h/d) unmeasured.

The weighted average PCC (I/h/d) comes in at 133.5 (I/h/d) in 2025/26. This is forecast to fall to 111.2 (I/h/d) in the Final Plan forecast as demand management option savings are realised and customers switch from unmeasured to measured status

8. Demand management options

Ruthamford Central

8.1 Regional overview:

Across the entirety of the Anglian Water region our demand management strategy will comprise three strongly interlinked programs:

Water metering program:

• We plan to complete our smart meter rollout, replacing all existing meters over 10 years (two AMPs). By 2025, 1.1 million smart meters will be installed across Anglian Water. These meters will give customers better insight into their water use and help us guide behaviour change. They will also improve our ability to detect leaks, cutting down plumbing losses and supply pipe leaks.

Leakage reduction

 \bigcirc

• Our goal is to cut leakage by over 45 million litres per day between 2025 and 2050. This builds on our current programme, which will reduce leakage by 27 million litres per day (14%) by 2025 as part of AMP7

Water efficiency measures

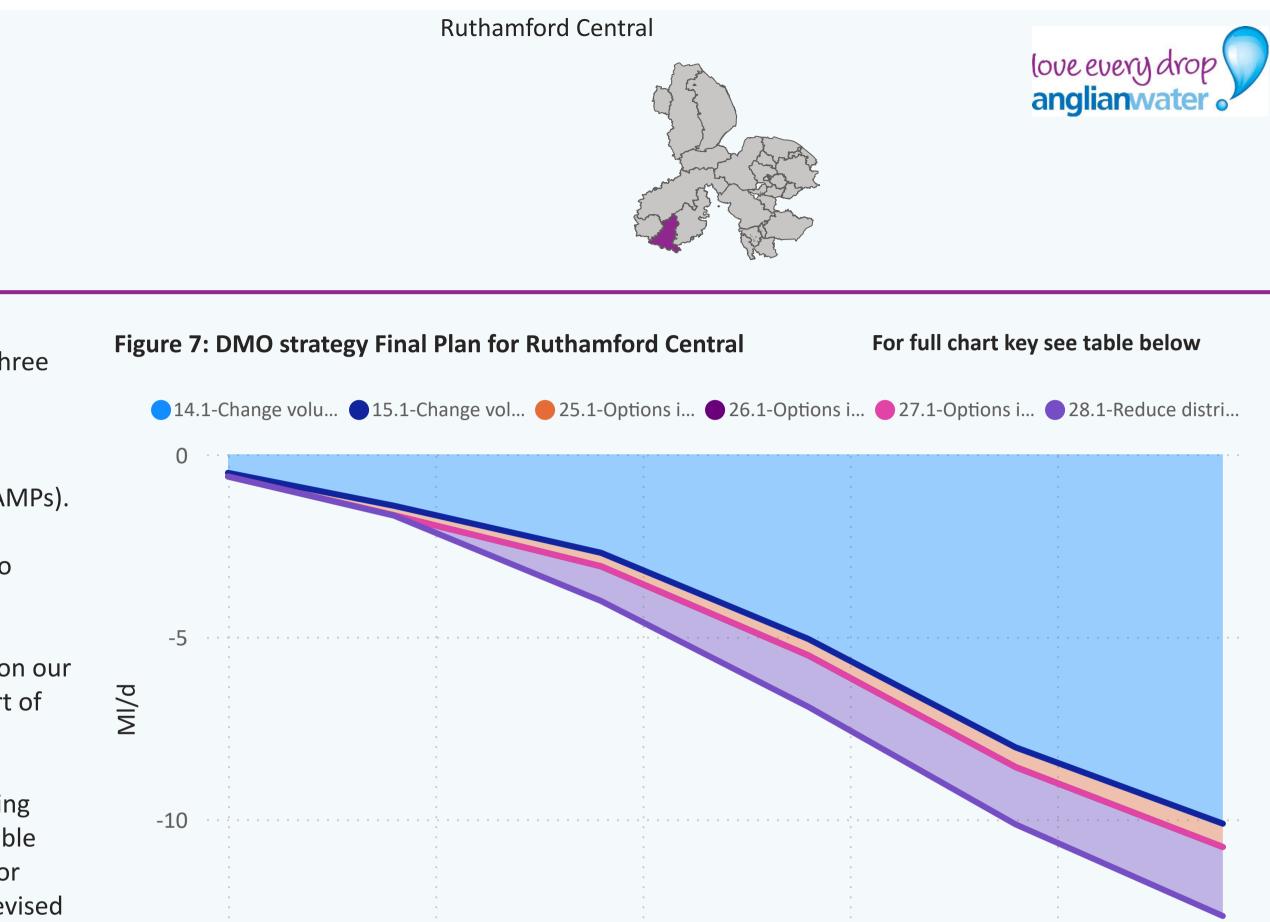

• New tools and actions will support the careful use of water. Our updated plans include promoting smart devices, expanding our Multi-utility web portal, offering garden tips, and helping vulnerable customers with plumbing and supply pipe issues. We'll also run community reward schemes. For non-household customers, we've added water-saving visits and leak reduction actions to our revised draft WRMP24.
